How to install R and RStudio

Please make sure that your computer has both R and RStudio installed and working and you have admin privileges on your computer.

For new installs:

- Having the latest versions of both R and RStudio is advised. For R it is **R-4.0.+**, for RStudio it is **RStudio Desktop 1.4+**

If you already have R and RStudio on your computer:

- Make sure that the R version is **at least 4.0.0**, and for **RStudio, 1.4.+** and above.

Download and install R

- Download R for windows from here: https://cran.r-project.org/bin/windows/base/
- Download R for OSX from here: https://cran.r-project.org/bin/macosx/
- Download R for Linux: https://cran.r-project.org/

We will use RStudio for the course, that is an integrated development environment which will make sure that writing in R is a more pleasurable experience. More on how to use it during our first class.

Download and install RStudio

You can get the fully functional free version from here:
